Hello, StuntCoders!

I am writing to express my interest in applying for the internship program at your company. I learned about your company from a friend of mine who is a Magento Front-end developer at Navipartner and who recommended you to me. After visiting your website I immediately realized that you are a company I was looking for because you perceive your team as a family, and everybody knows what family means, so it would be my pleasure to learn from you and be part of your family.

At my current job I was not truly happy, so I decided it was time for a change. In April 2018 I started to learn JavaScript before going into work. I quickly started to love JavaScript and In January 2019 I decided to upgrade my knowledge with React and a little bit of Node, just to make a simple API.

From the moment I produced "Hello World" in the console of my first application, I knew I was hooked into the world of software development. But software development has never been " just a job " for me, it's an engaging challenge to continually learn and improve my skills in creating high-quality software. What started with a simple " Hello World" has become a full-fledged passion that only gets more exciting as years go by.

Because we know the best way to learn is to practice, I did a bunch of personal projects with the knowledge I gathered, so you can check them on my portfolio
- www.lukovicmarko.com

I know recruiting is quite stressful and I really hope it's going as well as you'd hoped.

Thank you for considering my application.

Sincerely,
Marko Lukovic
